

# T250 Inquiry Forms 2022 R2

[Home](#) > [Course Catalog](#) > [Development](#) > T250 Inquiry Forms 2022 R2

## Course Description

By completing this course, you will learn how to create an inquiry form with and without filtering parameters. You will also learn how to display data from multiple tables on a tab. **The current version of the course is valid for Acumatica ERP 2022 R2.**

Through the examples, you will learn how to perform the following tasks in Acumatica ERP:

- Create an inquiry form
- Add filtering conditions dynamically
- Retrieve aggregated data
- Add different types of redirection links to the inquiry form
- Display data from multiple tables on a form tab

## How to Use This Course

To complete this course, you will complete the lessons from each part of the course in the order in which they are presented. More specifically, you will do the following:

1. Complete Course Prerequisites, perform Initial Configuration, and carefully read Company Story and Customization Description.
2. Complete the lessons in all parts of the training guide.

## Quiz

## Congratulations!

You passed the quiz!

Your score is 93.33%

FEEDBACK

Select all statements that correctly describe the PXProjection attribute.

1 / 15

- ☒ The PXProjection attribute implements the projection of data from one table or multiple tables into a single DAC. ✓
- ☐ A DAC with the PXProjection attribute is bound to a database table with the same name.
- ☐ A data view with the PXProjection attribute can be used for displaying data from multiple tables.
- ☒ Inside the PXProjection attribute, you specify a fluent BQL query that selects data from multiple tables. ✓

To add reusable filters to a grid area, which attribute you need to assign to the corresponding data view?

2 / 15

- ☐ PXFilter
- ☒ PXFilterable ✓
- ☐ PXGrid
- ☐ PXDetailView

How do you map a field of a projection DAC to a database table field?

3 / 15

- ☒ By performing the mapping in a graph method ✗
- ☐ By specifying the BqlField property value for the DAC field
- ☐ By defining the mapping in a configuration file

How would you define redirection to the custom Repair Work Orders form in an action method?

4 / 15

- ☒ By throwing the PXRedirectRequiredException exception ✓

- ☐ By throwing the PXRedirectToUrlException exception
- ☐ By using the HttpResponseMessage.Redirect() method
- ☐ By using the PXSelector attribute

What template should you use to define an inquiry form in the Screen Editor? 5 / 15

- ☐ TabGrid (TabDetail)
- ☒ FormGrid (FormDetail) ✓
- ☐ Form (FormView)

Select all steps that are necessary for defining the Selection area of an inquiry form. 6 / 15

- ☒ Define the PXFormView element as containing boxes for filtering ✓
- ☒ Define a DAC for the Selection area ✓
- ☐ Define a data view of the PXFilterable type
- ☒ Specify that the primary data view for the form is the data view for filtering ✓
- ☒ Define a data view that provides filtering parameters ✓

Which ASPX element should you use to define a table on an inquiry form? 7 / 15

- ☒ PXGrid ✓
- ☐ PXFormView
- ☐ PXGridContent

Where do you configure the displaying of filter values in the URL? 8 / 15

- ☒ In the ASPX file of the form ✓

- ☐ In the graph for the form
- ☐ In the data view that provides filtering parameters
- ☐ In the DAC for the Selection area

How do you define a Cancel action on an inquiry form?

9 / 15

- ☐ By specifying the filtering DAC as a parameter for the graph
- ☐ By defining an action of the PXButton type and the action method
- ☒ By defining an action of the PXCancel<> type ✓

Suppose that for an inquiry form that contains filtering parameters, you need to have the selected parameter values in the form URL so that the same form can be opened elsewhere without the filter parameter values being entered again. How can you support this functionality for the form?

- ☐ By specifying True as the PageLoadBehavior property of the PXDataSource control
- ☒ By specifying PopulateSavedValues as the PageLoadBehavior property of the PXDataSource control ✓
- ☐ By specifying the data view of the Selection area as the PrimaryView property of the PXDataSource control
- ☐ By specifying PopulateSavedValues as the PageLoadBehavior property of the PXFormView control that corresponds to the Selection area

Select all aggregation functions.

11 / 15

- ☒ Min ✓
- ☒ Avg ✓
- ☐ Value

☒ Count ✓

☐ Aggregate

☒ Sum ✓

☐ Status

☒ Max ✓

How do you combine data by a value of a specific field?

12 / 15

☐ By using the aggregation attribute

☐ By sorting data in a data view delegate

☒ By appending the AggregateTo<> clause in the query ✓

Select all types of redirection that can be implemented with Acumatica Framework. 13 / 15

☒ To a report ✓

☐ To a window that contains the Acumatica Report Designer

☒ To a generic inquiry ✓

☒ To a destination URL ✓

☒ To a predefined form of Acumatica ERP ✓

☒ To a custom form of Acumatica ERP ✓

☐ To a workspace menu of Acumatica ERP

Select all correct statements about data view delegates.

14 / 15

☒ To define the delegate for a data view, you should add a method that has the same name as the data view, except with a different case for the first letter. ✓

☐ You need to use a data view delegate when you need to request data from multiple DACs.

☒ If no data view delegate is defined in the graph, Acumatica Framework executes the BQL statement from the data view declaration. ✓

☒ A data view delegate is an optional graph method that is executed when the data view is requested. ✓

How would you define the selection of records in read-only mode in a data view? 15 / 15

☐ You configure the ReadOnly property of the data view.

☐ You add the ReadOnly attribute to the fields of the main DAC of the data view.

☒ You use the ReadOnly view type. ✓

☐ It is impossible.
